Support vector machines for separation of mixed plant–pathogen EST collections based on codon usage

Authors	Caroline C Friedel, Katharina HV Jahn, Selina Sommer, Stephen Rudd, Hans W Mewes, Igor V Tetko
Publication date	2005/4/15
Journal	Bioinformatics
Volume	21
Issue	8
Pages	1383-1388
Publisher	Oxford University Press
Description	**Motivation:** Discovery of host and pathogen genes expressed at the plant–pathogen interface often requires the construction of mixed libraries that contain sequences from both genomes. Sequence identification requires high-throughput and reliable classification of genome origin. When using single-pass cDNA sequences difficulties arise from the short sequence length, the lack of sufficient taxonomically relevant sequence data in public databases and ambiguous sequence homology between plant and pathogen genes. **Results:** A novel method is described, which is independent of the availability of homologous genes and relies on subtle differences in codon usage between plant and fungal genes. We used support vector machines (SVMs) to identify the probable origin of sequences. SVMs were compared to several other machine learning techniques and to a probabilistic algorithm (PF …

ChEMoinformaticsPlus: the Erasmus Mundus Master degree in Chemoinformatics across Europe and beyond

7 universities are involved in the two years *Erasmus Mundus Joint Master's Degree ChEMoinformaticsPlus* that will open to its first student's edition in **September 2022**. The Erasmus Mundus label is awarded by the European commission to transnational Master programs that contribute to excellence and internalization of Higher Education in Europe.

Chemoinformatics is a major discipline in theoretical chemistry, using artificial intelligence and data sciences to tackle current social and innovation challenges in Chemistry. It concerns the development, creation, organization, storage, dissemination, analysis, visualization and use of chemical information. Within the last 20 years, Chemoinformatics has become a corner stone for the chemical Industry:

"The use of artificial intelligence/ machine learning technologies has become a critical part in the drug discovery processes and chemoinformatics plays an important role in integrating AI/ML approaches into the field of medical chemistry." (Astellas Pharma Inc.),

Marie Skłodowska-Curie Actions 2021-2027

Developing talents, advancing research

Under Pillar I of Horizon Europe, the MSCA are the European Union's reference programme for doctoral education and postdoctoral training. They support researchers from all over the world, at all stages of their careers, with a focus on their training, skills and career development.

Under Horizon 2020 (2014-2020), the MSCA:

Funded **1080 doctoral programmes**, of which 156 industrial doctoral programmes and 76 joint doctorates

Involved **4 700 companies**, of which **2 200 SMEs**

Involved **37% of researchers** from non-EU countries and around **1300 organisations** from non-EU and non-associated countries

Since 1996

budget
14 billion €

researchers
140 000
(39 000 PhDs)

Horizon Europe (2021-2027)

budget
6.6 billion €

researchers
65 000
(25 000 PhDs)

Under Horizon Europe, the MSCA will:

Strengthen organisations
The MSCA support excellent doctoral and postdoctoral programmes and collaborative projects worldwide, promoting structuring impact on organisations

Foster research and innovation beyond academia
The MSCA boost ties between academia and other non-academic organisations with various incentives, increasing fellows' exposure to other sectors

Build international links
The MSCA are key in attracting talent to Europe, building international, strategic partnerships, and promoting global research mobility and science cooperation

The MSCA have 5 main actions

Postdoctoral Fellowships

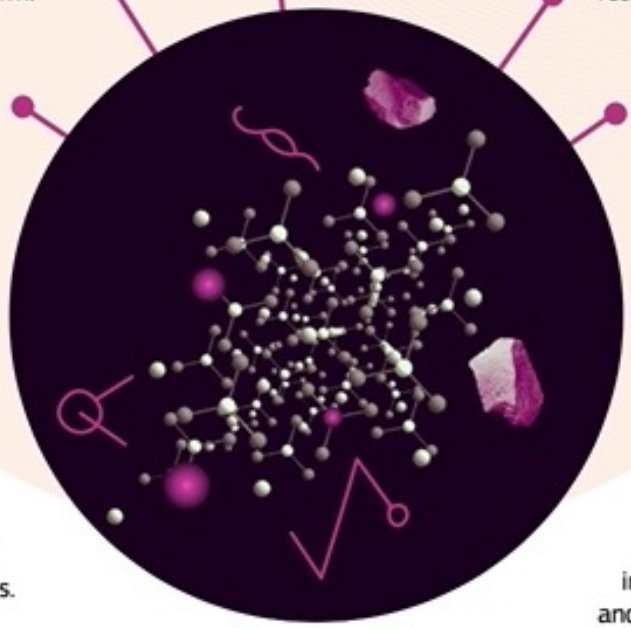
support researchers' careers and foster excellence in research and innovation. Researchers holding a PhD can carry out their research activities, acquire new skills and develop their careers abroad, whilst developing competences in non-academic sectors and working within interdisciplinary teams.

Doctoral Networks

implement doctoral programmes (including joint doctorates and industrial doctorates) **by international partnerships** of organisations from different sectors. They train highly-skilled doctoral candidates, stimulate their creativity, enhance their innovation capacities and boost their employability in the long-term.

Staff Exchanges

encourage short-term international and inter-sectoral exchanges of research and innovation staff through sustainable, collaborative projects in Europe and beyond. By doing so, they enhance knowledge and skills transfer and increase organisations' research and innovation capacities.



MSCA and Citizens

brings research and researchers closer to children, families and the public at large through the European Researchers' Night - the annual research communication and promotion event taking place at the end of September across EU Member States and Horizon Europe Associated Countries.

COFUND

co-finances regional, national and international doctoral and postdoctoral programmes for researchers' training and career development. The COFUND action spreads MSCA's best practices by setting high standards and excellent working conditions, and boosts training and international, interdisciplinary and inter-sectoral mobility.

Benefits of MSCA:

for organisations

- High-quality research training and supervision offered
- Build up strong research and innovation partnerships
- Strengthened research capacity
- Improved human resources and working conditions to attract the best researchers
- Sustainable knowledge transfer and new international and inter-sectoral collaborations
- Enhanced global visibility and attractiveness

for researchers

- New knowledge and skills in and outside academia
- Increased career prospects and employability
- Innovation-oriented mind-set, to convert ideas into products and services
- Networking and increased visibility in the European R&I community
- International, interdisciplinary and inter-sectoral experience and exposure
- Access to leading organisations and their teams

for European Research and Innovation

- Scientific excellence promoted in all countries
- Attract and retain talents in Europe
- High quality R&I for Europe's sustainable growth
- Increased strategic cooperation and brain circulation between countries, disciplines and sectors
- New links between research, industry and society
- Stronger European Research Area (ERA)

Nobel price to former MSCA fellow

On 7 October 2020, the Royal Swedish Academy of Science awarded the Nobel Prize in Chemistry to Emmanuelle Charpentier and Jennifer A. Doudna ‘for the development of a method for genome editing’.

Dr Charpentier is a former MSCA fellow and principal investigator involved in the training of young researchers in the field of genomics in the MSCA project ENLIGHT-TEN ITN.

MSCA ITN applications

- Strong scientific competitive program, success rate ca 10%
- Evaluation is done of the whole consortium not of the individual partner
- Complementarity of partners
- Strong training program (“Curriculum”)
- Strong training in complementarity skills

10 doctoral (PhD) positions in Big Data Analysis in Chemistry, Marie Skodowska-Curie ITN BIGCHEM (http://bigchem.eu)

BIGCHEM (BIG data in CHEMistry) is a Marie Skodowska-Curie Innovative Training Network (ITN) for Early Stage Researchers (ESR) funded by the European Commission under the H2020 Programme. The BIGCHEM ITN will provide a comprehensive and cross-disciplinary structured curriculum for doctoral students in large chemical data analysis using machine-learning, computational chemistry and chemoinformatics methods. The innovative research program will be implemented with the target users, large pharma companies and SMEs, which generate and analyse large chemical data.

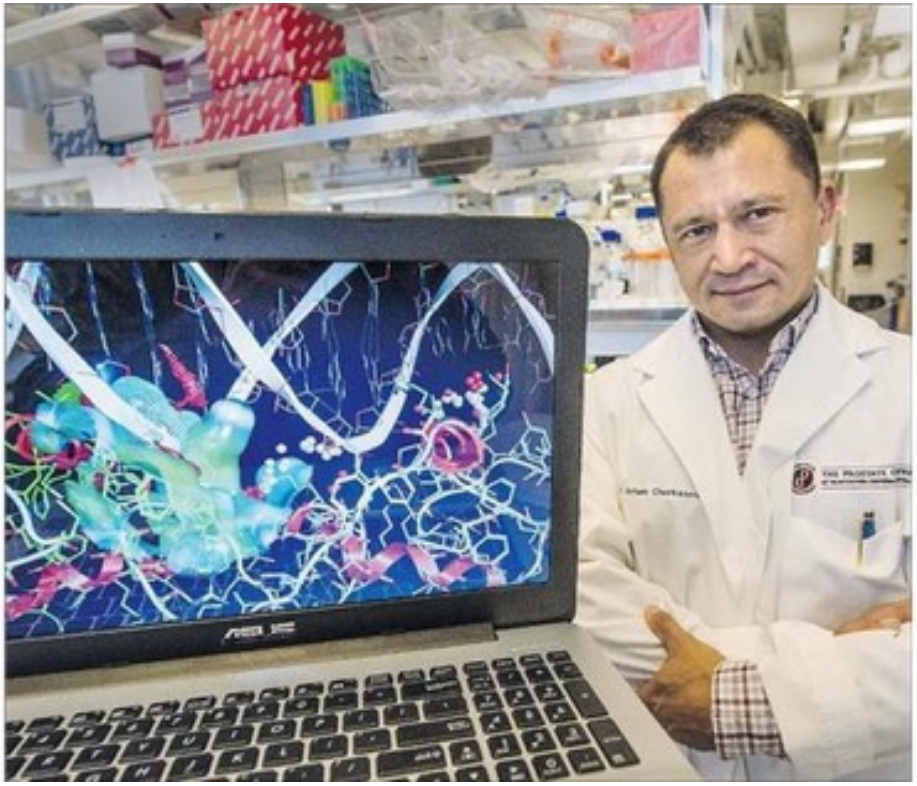
UBC lands massive licensing deal for cancer drug



Researcher Artem Cherkasov displays a computer model simulation used to develop a new treatment for drug-resistant prostate cancer at the Vancouver Prostate Centre . '**Using computer simulations, we sometimes go through 50 million compounds to find a molecule that will seat in a precise and accurate way**,' he says. Photograph by: Steve Bosch, PNG

Under the terms of the agreement with Roche, UBC and VCHRI receive an upfront payment and up to $141.7 million US in milestone payments if the drug moves through pre-clinical and clinical trials, regulatory approval and meets sales targets, and then royalties thereafter.

First-in-class drug for blood cancers discovered by Ontario researchers receives record-setting industry investment

Years of hard work by OICR's Drug Discovery group and Ontario partners moves potential new treatment for leukemia towards clinical trials

On January 29, 2019, Celgene Corporation made an investment of up to US$1 billion that will facilitate further research and development of the potential drug and support clinical trials in Ontario. The potential drug was designed to exploit a weakness in leukemia centred on the protein WDR5 that was discovered by Ontario researchers.

Go-Bio 1st round, Award ceremony, 2006

Özlem Türeci, Roland Jahns, Annette Schavan

Topics from the Go-Bio GründungsGespräche

GG1 - Nov. 2007 - IP-strategy and coaching
GG2 – March 2008 - Business plan and preparations of financing negotiations
GG3 - Nov. 2008 - The first round of financing - requirements and factors of success
GG4 - March 2009 - Clinical studies – an introduction
GG5 - Nov. 2009 - Management
GG6 - March 2010 - Quality management
GG7 - Nov. 2010 - Business game "Risky Business" (development of pharmaceuticals)
GG8 - May 2011 - Negotiation management
GG9 - Dec. 2011 - Contract design
GG10 - May 2012 - Presentation technique, customer and investor approach
GG11 - Dec. 2012 - IP and company takeover
GG12 - Apr. 2013 - Experience reports from GO-Bio founders
GG13 - Dec. 2013 - Team development and HR management
GG14 - May 2014 -Coaching
GG15 - Dec. 2014 - Financing
GG16 - May 2015 - Governance, risk management & compliance (GRC)
GG17 - Nov. 2015 - Company simulation
GG18 - June 2016 - Contract design and team pitch
GG19 - Dec. 2016 - Experience reports
GG20 - May 2017 - IPO
GG21 - Dec. 2017 - Corporate Communications
GG22 - June 2018 - Clinical Studies
GG23 - Dec. 2018 - Business simulation game
GG24 - May 2019 - Coaching, business etiquette, team development
GG25 - Nov. 2019 - Contract law
GG26 - Nov. 2020 - IP-strategy
GG27 – June 2021 - Financing
GG28 – Dec. 2021 - Business plan
GG29 - Jun 2022 – Contracts and contract negotiations
GG30 - Sep 2022 – Business simulation
GG31 - May 2023 - Team, Team, Team!

GründerGespräche

Know-how: The 'GründungsGespräche' provide the GO-Bio teams with helpful and practical information to prepare them for setting up a
running their company.

A chronology of entrepreneurship

2007 Bundesministerium für Bildung und Forschung — GO-Bio

2009 Helmholtz Enterprise

2010 eADMET — THE REFERENCE IN CHEMOINFORMATICS

START-UPS

Start-ups

Getting start-ups off the ground

Supporting start-ups is a particular focus of our work. We have already accompanied over 100 start-up projects. You too can benefit from our experience!

As a company founder:

Together, we create favourable starting conditions, avoiding the mistakes that others have made before. We also connect you to the right people: investors, partners, potential customers.

As a partner institute:

Offer your entrepreneurial scientists optimal support – without having to build up internal resources and know-how. You profit from the proceeds that come from our equity in successful start-ups. These are distributed by the LifeScience Foundation, mainly as grants to be used as desired by the originating institutes.

As an investor:

Discover our attractive start-up projects with a strong IP footing – before they become visible to a broader public at regular industry events.

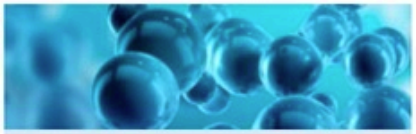
OCHEM

OCHEM is our platform for the creation of in silico ADME / Tox prediction models. We offer a free version of the modeling development environment for academic use.

Free Version



ePhysChem

Using ePhysChem the physical properties of substances can be assessed quickly. ePhysChem contains AlogPS 3.01 for logP and logS prediction and many other models. Try our free version!

Free Version

Training

Our next in silico ADME/T training courses start in Winter 2014. If you are interested in a course or have specific questions, please use our contact form or call us. Independant from our scheduled courses we can offer you and your team with individualized training content about QSPR, QSAR and in silico ADME / Tox ...

Consulting

We create models for you and carry out literature and database searches. Get models built on with thousand of external and internal measurements - maximizing the information content of your data and getting a clear view on the achievable accuracy of in silico predictions for your compounds. Quickly and inexpensively.

Key issues for *in-silico* ADME/Tox

eADMET *in-silico* tools

- Need structure information only, Identify poor predictions.
- Saves time and costs in R&D
- Fail early, fail fast, fail cheap

but

In-vitro and *in-vivo* testing of actual compounds are considered more reliable than *in-silico* tools

Key feature: accuracy estimation

Method	Costs	Time	Quality
Blind *in-vitro* testing of all compounds 			
Blind *in-silico* prediction of all compounds 			
eADMET: *in-silico* prediction plus intelligent testing of selected compounds  +

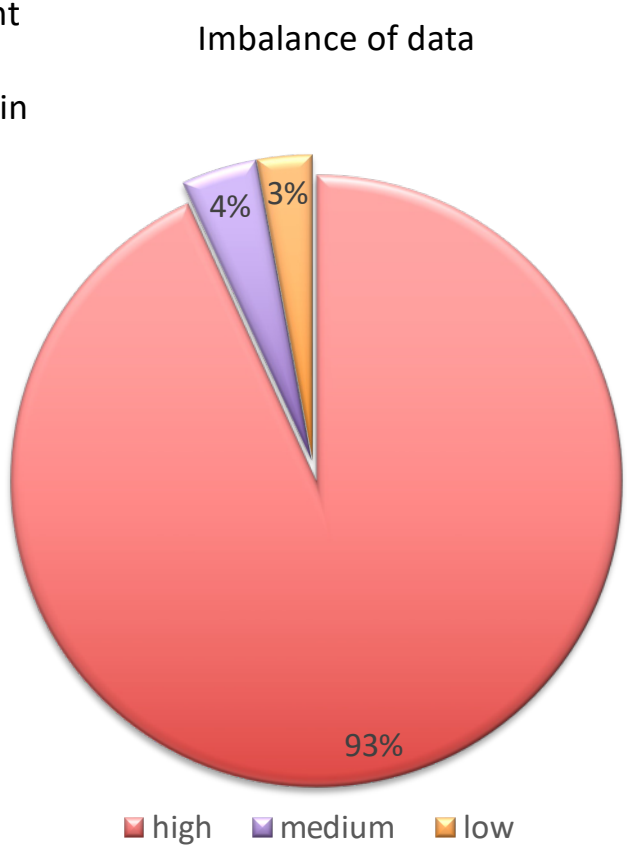
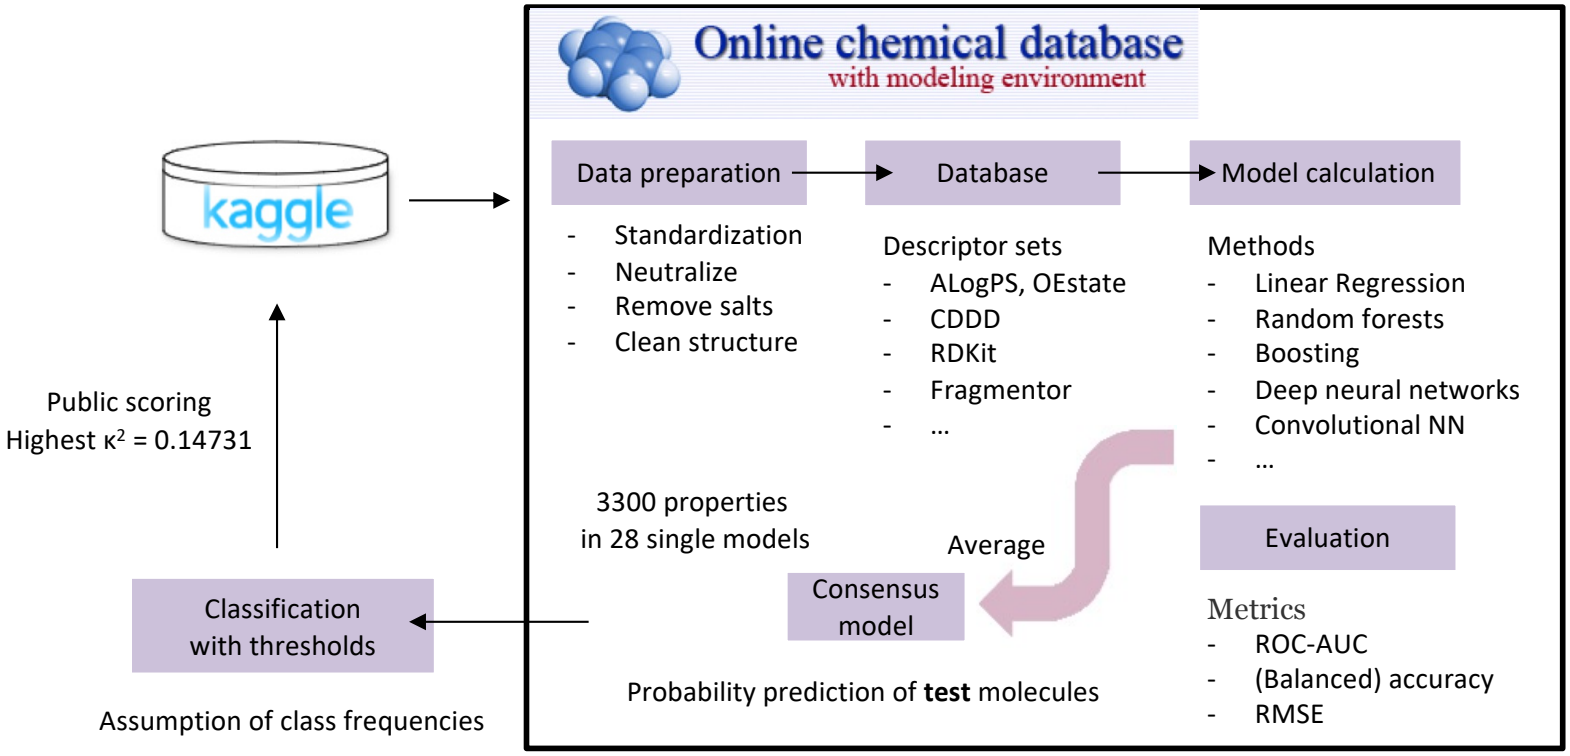
Challenge set-up

- Experimentally: Nephelometer measures undissolved sediment
- Classification into *low*, *medium* and *high* soluble with phenytoin and amiodarone as thresholds
- 70k training datapoints, 15k public leaderboard, 15k private leaderboard
- Stratified random sampling



Workflow with OCHEM



OCHEM for modeling

- Graphical interface allows comprehensive modeling without explicit coding
- Implementation for GPU and CPU use
- Consensus models:
  - Average over multiple models to improve prediction
  - Orthogonal models
  - Various descriptor sets/ molecular representations

Metrics: AUC for Training set Validation: Cross-Validation (84 models)

About the Data

The Challenge

The 2014 Tox21 data challenge is designed to help scientists understand the potential of the chemicals and compounds being tested through the Toxicology in the 21st Century initiative to disrupt biological pathways in ways that may result in toxic effects.

The goal of the challenge is to "crowdsource"

All challenge winners will receive the opportunity to submit a paper for publication in a special thematic issue of *Frontiers in Environmental Science* and recognition on the NCATS website and via social media.

openochem / README.md

Open OCHEM -- AI models for drug discovery and environmental chemistry

The Open OCHEM is open source version of the On-line Chemical database and Modelling Environment Platform (http://ochem.eu)

It is a user-contributed repository of referenced experimental data, computational tools and models of ADMET properties of chemical compounds. The OCHEM algorithms can reliably identify compounds predicted with experimental accuracy: there is no need to test them in a lab. The OCHEM can be used for timely and low-cost identification of scaffolds with lower risks of failure due to the unfavorable physico-chemical and/or biological properties. The free open source of OCHEM is a reference system for academic users thus accumulating data and knowledge produced in academia. The developed OCHEM workflow allows an unbiased comparison of different existing and new machine learning algorithms which can be easily integrated in OCHEM by its users.

OCHEM software can be used to develop QSPR and QSAR models for various biological and physico-chemical projects. It can work with millions of molecules and can be configured to use hundreds of CPUs or GPUs. Open OCHEM allows you to install the fully functional version of the software and analyse your data privately. The closed source version is also available from BIGCHEM GmBH and provides several additional optimized software packages which were contributed by the company or its partners.

The open OCHEM currently supports tens methods and descriptors packages, which were developed and contributed by different providers and are distributed under the open source or respective license agreements (most of them are free of charge for academic, educational, recreational or evaluation purposes - check each respective license agreement).

See installation instructions how to install and run open the OCHEM.

We wish you a happy computing!

We sincerely thank Yuriy Sushko, Sergey Novotarskyi, Pavel Karpov, Mark Embrechts, Ivan Khokhlov, Robert Körner, Anil Kumar Pandey, Elena Salmina, Stefan Brandmaier, Larisa Charochkina, Vasyl Kovalishyn, Ahmed Abdelaziz, Matthias Rupp, Dipan Ghosh, Zhonghua Xia, Alli Keys as well as many other current and former members of Tetko's group and eADMET and BIGCHEM GmbH companies for their contributions to the development, testing, use and the feedback.

We also thank developers of CDK, MOPAC2016, KGCNN, OpenBabel, Xemistry, BALLOON, WEKA as well as Vsevolod Tanchuk, Sergey Sosnin, Maxim Fedorov, Peter Ertl, Bruno Bienfait, Ruud van Deursen, Gilles Marcou, Igor Baskin, Artem Cherkasov, Pavel Polishchuk, Eugene Radchenko, Vladimir Palyulin, Vijay Masand, Vishweh Venkatraman, Andrea Mauri, Weida Tong, Huixiao Hong, Todd Martin, Peter Jarowski, Vladimir Poroikov, Dmitriy Filimonov, Atif Raza and many others who contributed modules that are used in the OCHEM.

Questions

1) What kind of difficulties that you have encountered? How did you overcome?
2) How did you develop your career skills(such as technical skills for your job)?
3) How we can learn to think as a researcher? Do you have any tips for that?
4) Have you ever give up anything during your journey as a researcher?
5) Do you have any recommendations to the students who are doing their masters degree before starting to pHd?
